

IMPORTANT INFORMATION CONCERNING THIS HDRI PACK.

CALIBRATION OF THE HDRI:

All of the HDRI in this pack have been calibrated to provide accurate colors and real exposure values inside the render engines to provide an easy, fast and very accurate system to emulate the real world lighting in 3D.

Non-calibrated HDRI cause lack of contrast and ireal colors.

HDRI with precise skies and sun achieve a photorealistic contrast.

NEW AND IMPROVED

To improve user experience, all of the Pack 02 HDRI include the following features:

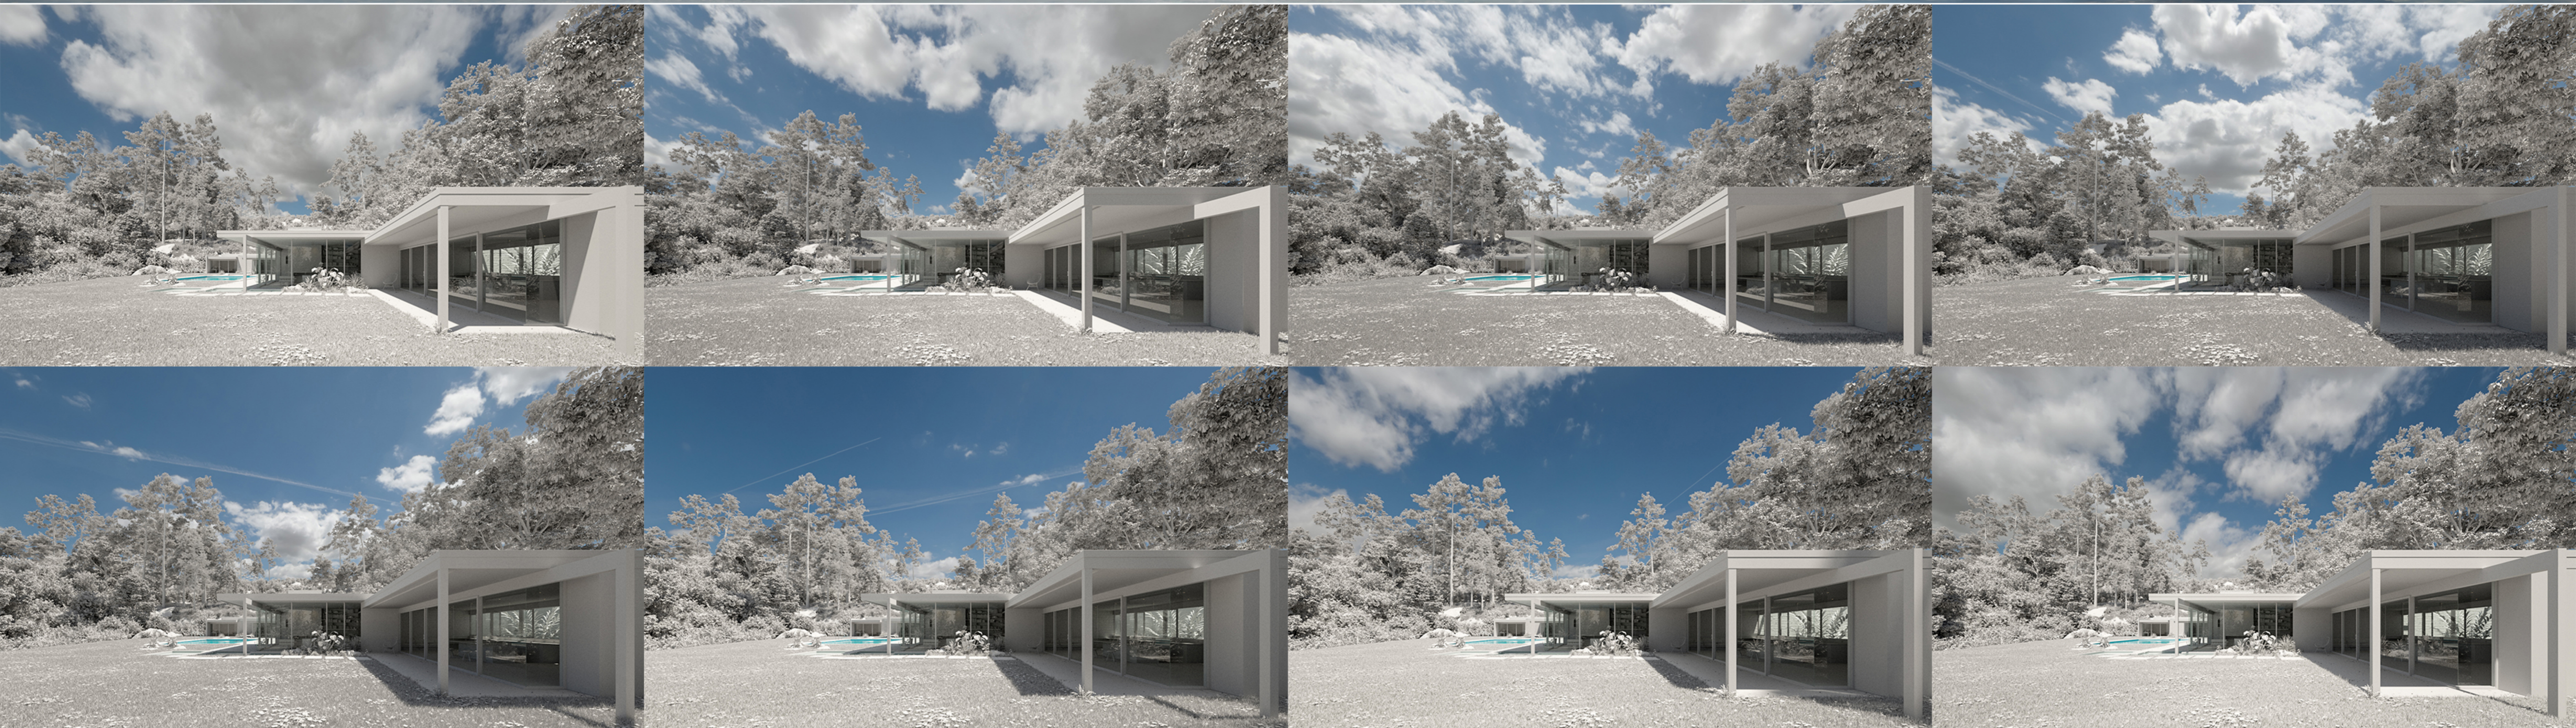

- 1. Absolute exposure value:** it is no longer necessary to enter the multiplier value since being absolute will always be 1. Remember that the exposure depends on the configuration of your physical camera as it would happen in the real world. This offers better results combining natural lighting and artificial lighting and allows us a work system very similar to a real camera.
- 2. Inclusion of some non-intrusive elements located on the HDRI horizon,** such as low distant mountains that allow us to increase horizon realism of our scene and add important details when we use the HDRI as a background.
- 3. Backplates corresponding to each HDRI:** each HDRI includes up to 8 RAW CR2 images (8K).
